

**REMARKS**

Applicant elects, with traverse, to pursue the species of Figs. 1-22. Accordingly, applicant withdraws claims 6, 9-10, 25, and 46 without prejudice or disclaimer of the subject matter contained therein, as being drawn to Species II.

Applicant respectfully disagrees with the examiner's assertion that Figs. 1-22 disclose an invention that is distinct from the invention disclosed in Figs. 23-30. The two species represent two embodiments of the same invention, with Figs. 23-30 illustrating alternative designs for the cylinder housing, springs, pins, and spring catch, as well as the inclusion of a removable side panel 220. The removable side panel 220 was added for future development of a master keying system to be used with the lock cylinder. The basic structure and operation of the lock cylinder is the same in both species.

Respectfully submitted,

Richard J. Veltman  
Reg. No. 36,957

Date: 10/10/2005
